

Ticket ID	Alert Message	Severity	Details	Ticket status
A-2703	SERVER-MAIL Phishing attempt possible download of malware	Medium	The user may have opened a malicious email and opened attachments or clicked links.	Escalated ▾

Ticket comments
The alert detected that an employee opened an email and clicked on the attachment, which corrupted their computer. This email is a phishing attempt based on several factors. The sender email is from an unknown domain, 76tguyhh6tgftrt7tg.su, that does not match the company name, Def Communications, or the name in the message, Clyde West. The sender IP address is suspicious, 114.114.114.114. Both subject and message body contain numerous grammatical errors, notorious for phishing attempts. The attachment in the email, 'bfsvc.exe', was clicked and once executed it infected the machine. A previous investigation of this file's hash on VirusTotal revealed it is malicious. This alert must be escalated to level II as it is indeed malicious with a Medium severity score.

Additional information

Known malicious file hash:
