

Incident handler's journal

Date: March 12, 2026	Entry: 01
Description	Phishing Security Incident Documentation
Tool(s) used	NONE
The 5 W's	• This security incident was caused by an organized group of unethical hackers who are known to target healthcare and transportation industries. • The cause of this incident was a phishing email that contained a malicious attachment. Once it was downloaded, ransomware was deployed encrypting the organization's data. • This incident occurred on a Tuesday morning, at approximately 9:00 a.m. • This incident took place in a small U.S. health care clinic specializing in delivering primary-care service. • A company employee opened a phishing email and downloaded the malicious attachment which injected the ransomware. The data will not be decrypted until a ransom is paid.
Additional notes	Security awareness training specifically around phishing should take place quarterly at this organization. All employees should be aware of how to spot suspicious emails and report them accordingly.
