Description	Phishing Alert - Ticket #A-2703
Tool(s) used	Phishing Playbook, Phishing Flowchart
The 5 W's	Capture the 5 W's of an incident. • A threat actor impersonating "Clyde West" from "Def Communications" using a suspicious domain (76tguyhh6tgfrt7tg.su). • A phishing email was sent to the HR department containing a malicious executable (bfsvc.exe). The employee opened the email and the attachment, leading to a potential system compromise. • Wednesday, July 20, 2022, at 09:30:14 AM. • Targeted at the internal HR department email (hr@inergy.com). • The attacker used social engineering (impersonating a job applicant for an "Egnieer" role) to bypass initial scrutiny and deliver a verified malicious payload.
Additional notes	The alert was escalated to Level II because the file hash was confirmed as malicious (Flagpro malware) and the email displayed multiple high-fidelity indicators of phishing: sender/domain mismatch, suspicious source IP, and significant grammatical errors.
